

Advanced Hydrologic Prediction System

By Greg Forrester - Senior Forecaster

AHPS is a product that can be found on the internet. It stands for Advanced Hydrologic Prediction Service. It provides regular updates of river gages and lake stages across the Weather Service Forecast Office (WFO) forecast area. For WFO Glasgow, data from 32 river gages and the height of Fort Peck Lake is available. An example of AHPS display is shown below. The WFO Glasgow AHPS page can be found on the internet at:
