

# National Weather Service Forecast Office Missoula, Montana

## West Fork Fish Creek Flash Flood Potential

### Type of rain needed for flash flooding:

- HIGH INTENSITY rainfall produced by thunderstorms.
- 0.40 inches of rain or more in 30 minutes.

### Greatest risks:

- Homes near unnamed watershed.
- West Fork Fish Creek Road.

### Impacts:

- Fast, powerfully moving water.
- Debris flows (consisting of rock, mud, and trees) moving at very dangerous speeds.

## **BE ALERT!**

Flash floods and debris flows can quickly inundate streams, channels, and low lying area; impacting roads, trail systems, and campgrounds.

**Be aware of any precipitation that develops!  
DO NOT WAIT for a warning to evacuate.**

If rainfall is occurring in or upstream of your location, and you are in or near a burn scar area, **YOU ARE AT RISK!**
