

# Montana Drought/Precipitation Summary

August 19, 2003

Montana weather and precipitation summary, through August 18 2003.

Typical summer precipitation patterns have prevailed thus far in August. Scattered thunderstorms have dropped locally heavy amounts of rainfall across the state. Many areas have continued the dry pattern that has prevailed for most of the summer. Though some locations have received more than their average precipitation to date, the water-year values remain low, with respect to normal. Five locations are now in the top ten driest water-year periods of record. Very warm temperatures have persisted as well. Several long-term records for heat have been established, continuing the heat spell that began in July. So far in August, temperatures have averaged 3 to 8 degrees above the 30-year average. Temperatures over 100 degrees were recorded in many areas of the state, for several days in a row.

**Historical Rank of Precipitation (inches)  
for the Past Month and Water Year to Date**

Location	Aug 1 - Aug 18	% of Normal	Oct 1 - Aug 18	% of Normal	Rank	Years on Record
Billings	T	0	8.53	65	9 <sup>th</sup> driest	69
Bozeman	0.30	49	12.75	92	19 <sup>th</sup> wettest	62
Butte	0.69	82	8.19	73	17 <sup>th</sup> driest	84
Cut Bank	0.02	2	4.73	45	2 <sup>nd</sup> driest	90
Dillon	0.60	107	7.39	73	22 <sup>nd</sup> driest	65
Glasgow	0.82	111	9.74	89	45 <sup>th</sup> driest	110
Great Falls	1.18	123	8.30	73	10 <sup>th</sup> driest	110
Havre	0.75	104	8.50	85	30 <sup>th</sup> driest	123
Helena	0.61	79	8.01	82	26 <sup>th</sup> driest	123
Kalispell	0.19	26	8.85	57	4 <sup>th</sup> driest	103
Lewistown	0.35	32	12.10	77	14 <sup>th</sup> driest	77
Livingston	0.63	88	12.93	95	23 <sup>rd</sup> wettest	54
Miles City	0.26	37	8.84	73	10 <sup>th</sup> driest	109
Missoula	0.16	25	11.31	92	20 <sup>th</sup> driest	54
